

WATER

Our implementing partner, **Innovation: Africa (IA)**, an Israeli NGO (Non-Governmental Organization), drills up to 250 meters (820 ft) to reach the aquifer, and is capable of pumping over 20,000 liters of clean, life-giving water per day, per village.

IA'S LIVE TECHNOLOGY

Managed by iA, our projects are **100% successful** and tracked in real time by the iNemote Monitoring System, which received the Innovation Award from the United Nations.

The world-renowned technology makes our projects resistant to breakdown, vandalism, theft, and typical problems faced by water systems installed by other aid organizations.

FOOD

Once water is provided, Israeli NGO CultivAid transfers knowledge and implements innovative and sustainable farming solutions. Research with **Hebrew University** enables CultivAid to support agricultural development to ensure food security, decrease childhood stunting and improve overall nutrition, while providing opportunities for economic advancement.

Optimal agricultural technology, such as drip irrigation, enables farmers to grow larger quantities of nutritious foods with minimal water, resulting in 5-12 times the yield!

Save one life for just
\$25 a month

Water 4 Mercy, Inc., a USA 501(c)(3) non-profit. EIN: 83-1742012

HOPE

AITEC, the Agricultural Innovation and Technology Centers: sharing Israeli expertise and 'Teaching their Teachers to Teach' with the premier vocational training school network, **Don Bosco Technical Institutes of Africa**.

Growing a new generation of experts, AITEC is a game-changing program that emphasizes long-term self-sustainability. With a strong connection to Israel's extensive knowledge, AITeC promotes the development of a vibrant and dynamic ecosystem to transform and optimize Africa's water, food, and energy sectors.

THE NEED IS CLEAR.
SIMPLE COMPARISON.
CLEAR NEED

WHERE WATER FLOWS,
SO DOES HOPE.

Your donation **provides both** to villages in need.

What if this was the
ONLY WATER you
had ?

Clean, **SAFE WATER**
can change lives.

 @Water4Mercy

Water 4 Mercy is a USA 501(c)(3) non-profit organization.

Water 4 Mercy's

mission:

To uphold human dignity by
eradicating thirst, hunger and
poverty.

CLEAN WATER PROVIDES A
STARTING POINT
FOR A NEW WAY OF LIFE.

Imagine devoting an entire day to searching for water that is dirty and infested with feces just so you can drink and cook. That's what many remote African villagers endure daily, which leads to a vicious cycle of poverty.

Water 4 Mercy helps break that cycle by providing clean water, agricultural technologies and modernized educational solutions to remote African villages. With easy and consistent access to clean water, villagers can focus on building a thriving community rather than spending every day searching for enough water to just survive. With lifesaving water, the community can grow good food, children can attend school and study, and a myriad of new commerce opportunities become available. Consistently flowing clean water transforms every community where a modern water system is installed, and rather than needing repeated help, these communities can take responsibility for themselves, with dignity and great enthusiasm.

WATER

With our Israeli NGO contractor Innovation: Africa we provide advanced solar-powered water systems and install real-time remote monitoring units. This ensures that each of our projects is 100% successful. These systems pump over 20,000 liters of clean, life-giving water per day per village!

FOOD

Once water is flowing, drip irrigation is installed. With less water, this innovative technique empowers farmers to grow more nutritious food in greater quantities to help sustainably keep families fed and overcome malnutrition. Also, using the expertise of agronomists CultivAid, an Israeli NGO, smart farming systems are introduced, along with extensive training for the locals. The agricultural advancements improve food security and provide opportunities for economic advancements.

HOPE

AITeC, our Agricultural Innovation and Technology Centers, are implemented within Don Bosco Technical Institutes of Africa and are truly TIKKUN OLAM- Repairing the World - TOGETHER! We are providing a unique hands-on curriculum in agriculture by sharing Israel's advanced knowledge and raising up future teachers and growers. We are teaching the teachers to teach so they bring their knowledge back, building the agricultural capacity of the region, for generations to come.

"Tikkun Olam"
REPAIR THE WORLD

THE NEED

1.8 Billion people use a source of drinking water contaminated with feces

350 Million people living in Sub-Saharan Africa are in need of water

The average time spent walking for water is Equivalent to 15 laps around a football field

OUR MISSION

With your help, Water4Mercy strives to permanently end the vicious cycle of poverty in Africa with life-giving water and drip irrigation farming
